

IRISH Nutrient Sustainability PLATFORM

WASTE

FOOD

ENVIRONMENT

R&D

ECONOMY

OUR VISION

To promote the United Nations Sustainable Development Goal Agenda – with respect to food, waste, climate, economic development and protection of the environment – across the island of Ireland through a stakeholder-led coalition. This envisions waste as a valuable resource and advocates for its sustainable reuse.

OUR MISSION

The Irish Nutrient Sustainability Platform is founded on the principle that waste is a valuable resource of nutrients, energy and other high-value products. Its mission is to enhance economic prosperity, whilst safeguarding the environment, through development of a circular, sustainable, society by advocating better resource management, reuse and recovery through stakeholder co-operation, corporate responsibility, education and technological innovation.

MEMBER BENEFITS INCLUDE:

- Support for the creation and development of new business opportunities, value chains and income streams
- A 'safe-space' for stakeholders to interact with regulators to discuss policy, challenges, solutions and technological innovations
- Access to an established network of national and international technology providers, cognate sustainability initiatives, governmental bodies, and EU agencies
- Networking and knowledge exchange with diverse stakeholders from across the waste value chain both nationally and internationally
- Corporate visibility and advocacy in the waste recycling and valorization sectors
- Recognition as a leader in sustainability through logo placement and promotion via Platform media outlets and events
- Brand association with respect to environmental stewardship and United Nations Sustainable Development Goals
- Access to funding opportunities and infrastructure to build collaborative research programmes with academic and technical centres of excellence

HOW WILL THESE BE REALISED:

- International technology showcases to disseminate current best-practice
- Networking events and workshops
- Research and development
- Knowledge exchange
- Technology transfer
- Advocacy
